Our offer

Design & Engineering

We transform your complex challenges into reliable, scalable, and secure digital products.

1 Product Consulting & Strategy

We align your business vision with technological reality.

In-depth functional analysis, product strategy definition, software architecture design, and customized UI/UX design optimized for the adoption of complex business tools.

2 Software Engineering & SaaS

We design robust platforms ready to support your growth.

Custom development (web, mobile, SaaS), deployment of high-performance architectures, data security, rigorous technical documentation, and skills transfer.

3 Artificial Intelligence & Data Science

We use your data to automate and predict.

Technological R&D, development of customized models (machine learning, deep learning), and intelligent automation of industrial or business processes.

4 Growth Tech & Automation

We develop the technical infrastructure for your growth.

B2B marketing and growth hacking strategies, conversion funnel design, CRM ecosystem integration (HubSpot, Zoho), and business process automation.

Recent use cases

Medic Pub - Secure medical platform

Centralization platform for clinics, 360-degree management and oversight of facilities.

Oragius - Flood machine learning model

Complete pipeline for predicting flood risks in Quebec, patent pending.

Printags - Automated e-commerce

Implementation of AI agents for customer support and product sheet generation; optimization of ad campaigns.

Click - Creative landing page

Complete design of a landing page using mock-ups for a creative studio.
